with the Netskope One Client Application

COMING SOON EARLY 2025

ANNOUNCEMENT

Granular Security
& Visibility

The Netskope Enterprise Browser delivers deep inspection and real-time DLP, securing sensitive data within SaaS and internal web apps without the cost or complexity of traditional VDI.

The Netskope One Client serves as a high-performance unified agent, providing secure, ZTNA-based access to web, cloud, and private applications directly from any IGEL-powered endpoint.

Updated IGEL Digital Signage App

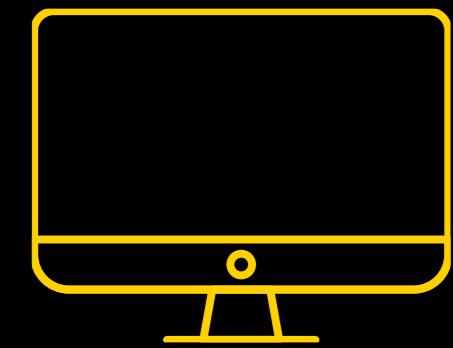

Supports diverse media types:

Webpages, real-time dashboards, videos, and slideshows for rich storytelling.

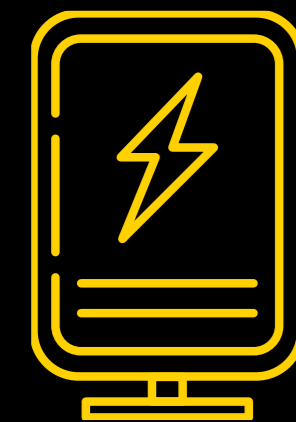

Interactive kiosk mode supports touch and mouse input to boost engagement and self-service

Multi-screen layouts enable up to six screens per endpoint for complex signage and split zones.

Flexible features empower consistent, impactful messaging across multiple locations and devices

Centralized management via IGEL's UMS simplifies configuration and content deployment.

IGEL + Evidian + NYMI: Secure Access for the Production Floor

IGEL OS12 is in the NIST lab for FIPS 140-3

IGEL OS 12

The Reality

- Cyber threats are increasingly target the endpoint
- Regulatory requirements are tightening
- Trust in cryptography is declining

The Challenge

- Not all encryption is created equal
- “Secure” is not the same as validated
- Organizations need provable assurance, not claims

IGEL  now  next

ensures:

ANNOUNCEMENT

- Validated cryptographic modules (not self-asserted)
- Cryptography tested in NIST and accredited labs
- Proven to resist tampering and key exposure
- Alignment with global regulatory expectations
